

SeaRM360 – YOUR **BIG DATA** SOLUTION

Do you have your data in many different systems? Do you want to see the **ONE BIG** picture?

SeaRM360 provides a 360° view of your fleet operations integrating data from all systems - Safety, Technical, Crewing, Financial, and Procurement – to show you the big picture of what is happening across your organization.

Empower everyone in the organization to make decisions that matter, the right decision, at the right time, backed with data.

BIOME is the business intelligence platform and goto destination for all analytics – integrating data from all systems - PMS, Safety, Voyage, Crewing, and Financial. Breeze through **TMSA** audits, manage the business through **KPIs**, and engage stakeholders with meaningful analysis. Mature organizations can do predictive analytics to see a bird’s eye view of what is happening across their fleet.

VesTrak is a vessel tracking system driven by **AIS Satellite Data**. It includes advanced features like weather, alerts for High Risk areas, Ice Zones, Special Zones as per MARPOL annexes and custom zones. See voyage histories, review passage plans, and make decisions taking all data, including data from VesRIM and BIOME, as well as location, into consideration.

VesRIM integrates all data in an app. Get all the information on your fingertips – on company, vessels, technical details, position and analytics. VesRIM is designed to connect information and decisions and includes a chat functionality to ensure that all parties who need to participate in decision making are included and have relevant information in their hands.
